

Shock★Star Surface

PRODUCT INFORMATION BROCHURE

Shock★Star Surface connectors are especially designed for the initiation of other shock tube detonators and to introduce a delay between holes.

The connector block is designed to ensure reliable connections in two positions: unlocked position for normal working conditions and locked position for most demanding working conditions with a risk of disconnection (e.g. under heavy mats).

Shock★Star Surface connectors are equipped with connector blocks able to contain 8 outgoing shock tubes. The connectors have a lowered base charge to reduce noise levels and eliminate shrapnel cut-off concerns.

Shock★Star Surface detonator can also be used for blast initiation. It is produced in lengths of 400, 600 and 800 m and is supplied on spools. Shock★Star Surface connectors must not be used for initiation of detonating cord.

BENEFITS

- Easy shock tube connection, locking mechanism to ensure locking of the tubes in the block if needed. Capacity of 8 shock tubes.
- Color coding according to the delay time of the detonator.
- Excellent delay time accuracy ensures greater than 99% probability of in-sequence initiation.
- Manufactured with red shock tubing for easy differentiation from in-hole detonators when inspecting the connected blast pattern.
- High impact protection.

PROPERTIES

Range of delays consists of 9 delay periods.
